DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claim 1-11, drawn to a method of increasing insulin sensitivity through administering an antisense oligonucleotide, a thiazoladinedione compound, or a polyunsaturated fatty acid, classified in class 514, subclasses 44, 365, and 560.
 - II. Claims 12 and 13, drawn to a method for identifying an agent, classified in class 424, subclass 9.2.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are unrelated in that the two methods vary in purpose as well as design. The method of increasing insulin sensitivity (Group I) is accomplished through either inhibiting the transcription of a SCD1 gene or through inhibiting the enzymatic activity of SCD1. Alternatively, the method for identifying an agent capable of increasing insulin sensitivity (Group II) is accomplished through contacting a test agent to a preparation or subject, human or non-human, with SCD1 activity and measuring the effects the test agent has on the preparations/subjects SCD1 activity. Group I deals with a known agent capable of increasing insulin sensitivity and administering that agent

Art Unit: 1616

to a human or non-human subject. However, Group II is attempting to identify agents that are capable of performing the functions of Group I, and therefore they have different modes of operation and effects.

- 3. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper. There would be considerable burden on the examiner to search all of the inventions of Group I and Group II.
- 4. In Group I, this application contains claims directed to the following patentably distinct species: thiazoladinedione derivatives, polysaturated fatty acid, antisense oligonucleotides. The species are independent or distinct because they have different structures which control the classification/subclassification.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, the claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species for search purposes that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations

Application/Control Number: 10/620,404

Art Unit: 1616

of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

5. A telephone call was made to Mr. Bennett Berson on 08/17/06 to request an oral election to the above restriction requirement, but did not result in an election being made. Mr. Berson requests to receive the restriction in writing.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nathan W. Schlientz whose telephone number is 571-

272-9924. The examiner can normally be reached on 8:30 AM to 5:00 PM, Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Johann Richter can be reached on 571-272-0646. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
